

Brilliant Knowbot Machines is an entrepreneur cooperation teamed up by several experienced good-hands with world-wide leading automated 300mm semiconductor manufacturing technologies.

Together with NTU, we are looking for young talents from campus to work with us in long run in the developing of new applications of AI, leading-edge communication techniques, sensors, hardwares and protocols to create values for our global customers.

With Japanese hardware manufacturing partner companies, we are creating a new system with innovative standards to realize the advantages of automation or so-called industry 4.0.

Join us, you can earn more than an internship but an entrepreneurship with flexible working style. If you are eager to be an expert at communication, automation, emulation, or simulation in the future industry 4.0 era, you are one of the potential candidate members to work with us.

You can work with us while continuing your study in campus. You will work with us in a real environment at customer's sites to deploy the new solution and realize the benefits with us.

Please feel free to contact with us to have a face-to-face interview via the IMs.
