- (Stability Analysis)

Consider the systems studied in [Problems 1, 2, 4, 6 of HW1](#) and use the solution provided for their respective **A, B, C, D**.

Discuss the stability of these systems in terms of values of these parameters used to model the systems.

That is, describe whether the system is **stable or asymptotically stable or unstable** with respect to different values of the related parameters.

For example, in [Problem 1](#), you might need to find the range of R_1 or L , such that the system is **stable, asymptotically stable, or unstable**.
